# Disclaimer

This is a comprehensive report based on our automated and manual examination of cybersecurity vulnerabilities and framework flaws. We took into consideration smart contract based algorithms, as well. Reading the full analysis report is essential to build your understanding of project's security level. It is crucial to take note, though we have done our best to perform this analysis and report, that you should not rely on the our research and cannot claim what it states or how we created it. Before making any judgments, you have to conduct your own independent research. We will discuss this in more depth in the following disclaimer - please read it fully.

DISCLAIMER: You agree to the terms of this disclaimer by reading this report or any portion thereof. Please stop reading this report and remove and delete any copies of this report that you download and/or print if you do not agree to these conditions. This report is for non-reliability information only and does not represent investment advice. No one shall be entitled to depend on the report or its contents, and Soken and its affiliates shall not be held responsible to you or anyone else, nor shall Soken provide any guarantee or representation to any person with regard to the accuracy or integrity of the report. Without any terms, warranties or other conditions other than as set forth in that exclusion and Soken excludes hereby all representations, warrants, conditions and other terms (including, without limitation, guarantees implied by the law of satisfactory quality, fitness for purposes and the use of reasonable care and skills). The report is provided as "as is" and does not contain any terms and conditions. Except as legally banned, Soken disclaims all responsibility and responsibilities and no claim against Soken is made to any amount or type of loss or damages (without limitation, direct, indirect, special, punitive, consequential or pure economic loses or losses) that may be caused by you or any other person, or any damages or damages, including without limitations (whether innocent or negligent).

Security analysis is based only on the smart contracts. No applications or operations were reviewed for security. No product code has been reviewed.

# Procedure

## Our analysis contains following steps:

1. Project Analysis;
2. Manual analysis of smart contracts:
  - Deploying smart contracts on any of the network(Ropsten/Rinkeby) using Remix IDE
  - Hashes of all transaction will be recorded
  - Behaviour of functions and gas consumption is noted, as well.
3. Unit Testing:
  - Smart contract functions will be unit tested on multiple parameters and under multiple conditions to ensure that all paths of functions are functioning as intended.
  - In this phase intended behaviour of smart contract is verified.
  - In this phase, we would also ensure that smart contract functions are not consuming unnecessary gas.
  - Gas limits of functions will be verified in this stage.
4. Automated Testing:
  - Mythril
  - Oyente
  - Manticore
  - Solgraph

# Terminology

**We categorize the finding into 4 categories based on their vulnerability:**

- Low-severity issue — less important, must be analyzed
- Medium-severity issue — important, needs to be analyzed and fixed
- High-severity issue — important, might cause vulnerabilities, must be analyzed and fixed
- Critical-severity issue — serious bug causes, must be analyzed and fixed.

## Limitations

The security audit of Smart Contract cannot cover all vulnerabilities. Even if no vulnerabilities are detected in the audit, there is no guarantee that future smart contracts are safe. Smart contracts are in most cases safeguarded against specific sorts of attacks. In order to find as many flaws as possible, we carried out a comprehensive smart contract audit. Audit is a document that is not legally binding and guarantees nothing.

# Token Contract Details for 09.06.2022

Contract Name: **Gnox**

Deployed address:

**0x63F02e42Eb4cD463a93AD44A8042420d335313bC - Token**

**0x7Dd1E67FC5Bf8De7CF2c728066bda0dF5Ccb5128 - Distributor**

**0xf4B881D982740D554F99093522312C653E26556B - AirDrop**

Total Supply: **5,000,000,000**

Token Tracker: **GNOX**

Decimals: **9**

Token holders: **1**

Transactions count: **1**

Top 100 holders dominance: **100.00%**

## Audit Details

Project Name: **Gnox**

Language: **Solidity**

Compiler Version: **v0.8.7**

Blockchain: **BSC**

## Social Profiles

Project Website: <https://gnox.io/>

Project Telegram: <https://t.me/gnoxfinancial>

Project Twitter: [https://twitter.com/gnox\\_io](https://twitter.com/gnox_io)

Project Instagram: <https://www.instagram.com/gnox.io/>

## Swap Analysis

- ✓ Token is sellable (not a honeypot) at this time
- ✓ Buy fee is less than 10% (10%)
- ✓ Sell fee is less than 10% (9.9%)

## Contract Analysis

- ✓ Verified contract source
- ✗ Ownership renounced or source does not contain an owner contract.

# Whitepaper of the project

The whitepaper of GNOX project has been verified by Soken team.

## Defi Earning Made Easy

### Introduction

Gnox has one of the fastest-growing communities within reflection projects due to its unique DeFi treasury feature, which allows the treasury to create a higher reward return from other protocols while airdropping returns in \$GNOX.

We are a decentralized platform whose main goal is to connect the gap between the crypto and fiat worlds while showing the benefits and ease of use of the Gnox Protocol to everyday users.

Gnox is built on the Binance Smart Chain (BSC). Binance offers quick transfer speeds, low fees, and high scalability compared to Ethereum and other competitors.

The Gnox Protocol is proud to be the world's first reflection project which uses our treasury to invest in DeFi yield earning protocols for its users! We are establishing a new standard in tokenomics and marketing techniques within the DeFi space. Gnox believes in rewarding long-term holders/users by generating a passive income for users proportionate to what the treasury makes within the timeframe. The nature of paying rewards in \$GNOX means that once we claim our rewards to pay our Gnox holders, there will always be a buying pressure to support our underlying price.

# Vulnerabilities checking

| Issue Description                    | Checking Status |
|--------------------------------------|-----------------|
| Compiler Errors                      | Completed       |
| Delays in Data Delivery              | Completed       |
| Re-entrancy                          | Completed       |
| Transaction-Ordering Dependence      | Completed       |
| Timestamp Dependence                 | Completed       |
| Shadowing State Variables            | Completed       |
| DoS with Failed Call                 | Completed       |
| DoS with Block Gas Limit             | Completed       |
| Outdated Compiler Version            | Completed       |
| Assert Violation                     | Completed       |
| Use of Deprecated Solidity Functions | Completed       |
| Integer Overflow and Underflow       | Completed       |
| Function Default Visibility          | Completed       |
| Malicious Event Log                  | Completed       |
| Math Accuracy                        | Completed       |
| Design Logic                         | Completed       |
| Fallback Function Security           | Completed       |
| Cross-function Race Conditions       | Completed       |
| Safe Zeppelin Module                 | Completed       |

# Security Issues

## 1) Owner Privileges

The contract contains ownership functionality and ownership is not renounced which allows the creator or current owner to modify contract behaviour.

## 2) Volatile Code:

The return values of functions

*swapExactTokensForETHSupportingFeeOnTransferTokens* and *addLiquidityETH* are not properly handled.

## Recommendation:

We recommend using variables to receive the return value of the functions mentioned above and handle both success and failure cases if needed by the business logic.

# Conclusion

Smart contracts are free from any critical or high-severity issues.

NOTE: Please check the disclaimer above and note, that audit makes no statements or warranties on business model, investment attractiveness or code sustainability.
